VECM Summary from Primary Chain

INTERPRETATION GUIDE

- ADF p>0.05 and KPSS p<0.05 -> likely I(1)-like; prefer differences/cointegration models.
- ADF p<0.05 and KPSS p>0.05 -> stationary; level models are more admissible.
- Ljung-Box p<0.05 -> autocorrelation; add lag structure.
- BP/White p<0.05 -> heteroskedasticity; use robust or HAC standard errors.
- JB p<0.05 -> non-normality; use robust inference and avoid strict normality assumptions.
- Stability flag=1 -> potential breaks/drift; use rolling or split-sample robustness.
- For retail transmission, compare no-promo vs promo-controlled estimates.

RUN NOTES

Primary chain is strictly ProducerUA -> ProZorro -> Retail. Retail is estimated separately for silpo, novus, and silpo_novus. Combined rule: daily median of available silpo and novus standardized_type prices.
